Leap ahead with an AI Readiness Assessment

Organizations are eager to harness AI, but success takes more than flipping a switch. Ensuring readiness across infrastructure, data security, user access, and training is essential to use AI effectively and responsibly. Without these foundations, you risk underutilizing the tools or exposing your business to potential risks.

Why start with an AI Readiness Assessment?
Our AI Readiness Assessment evaluates your Microsoft 365 environment and organizational posture across four critical areas:

Governance: Are the right policies, guardrails, and user education in place?
Licensing: Do you have the right Microsoft 365 subscriptions for Copilot?
Data Readiness: Is your content structured, secured, and accessible to AI tools?
Tenant Security: Are you protecting your business from AI-enabled risks?

(This assessment focuses on Copilot, but the insights apply broadly to all AI initiatives within your Microsoft ecosystem.)

What you'll receive
- **AI Readiness Scorecard** (Not Ready / Almost Ready / Ready)
- **Detailed Report** with prioritized recommendations
- **Remediation Roadmap** for fast, confident implementation
- **Executive Briefing** to guide next steps

If your organization is ready to leap into the future with AI, schedule your AI Assessment today!
