

# Leap ahead with a Ring of Security Cyber Risk Assessment

**55% of your cyber risk originates with your people, processes, and facilities — not your IT.** Leapfrog's CyberRisk Beyond IT program is unique in that it addresses 100% of your attack surfaces through our strategic and managed Ring of Security approach. It's designed to protect your information and systems, fill security gaps, make improvements in priority order, and manage everything holistically.

## Attack surfaces in addition to technology include:

**People:** Your company's most valuable asset is also the most vulnerable. Security awareness training and new strategies guard against human error and malicious intent.

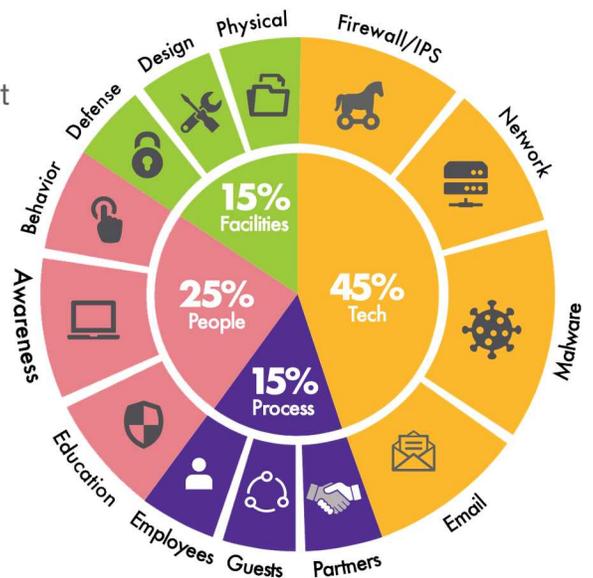

**Process:** Process problems are the root cause of most breaches. Manage risk by managing processes and compliance controls across the entire organization.

**Facilities:** It's not enough to protect your digital asset perimeter — you need comprehensive visibility into your facilities, including any IoT devices.

## Why start with a Ring of Security Cyber Risk Assessment?

To identify your organization's cybersecurity gaps, Leapfrog performs a thorough assessment of your organization's IT environment, compliance framework, and relevant policies and procedures. From there, Leapfrog designs your unique CyberRisk Beyond IT program to align with your goals, risk profile and tolerance, and budget.

**If you're ready for secure IT that keeps pace with your business strategy, schedule a Ring of Security cyber risk assessment today!**
